ITI COPA is one of the best non-engineering vocational courses related to computers and the Internet.

It is a 1-year regular ITI course offered by Industrial Training Institute to train students to work at the industrial level and whose goal is to spread technical knowledge about computers to a large number of people.

This COPA course is placed under the course of ITI because any person can do this course easily because of its cost because its cost is very less. And it is not a pricy course, the course can be done within a year.

This COPA is a course conducted to increase the basic knowledge of computers to the general public along with their basic knowledge about the internet and programming, data entry, networking, database management, JavaScript, internet browsing, etc.

The students are provided knowledge about computers and their uses, the internet, type of search engines, browsers, email, and many more through this course.
